

PAYSIM FRAUD SIGNAL ANALYSIS

Bronze Layer - Raw Data Review

BY MARY KANE

This notebook represents the Bronze layer of a medallion-style fraud analytics workflow. The purpose of this stage is to understand the raw transaction dataset before applying validation rules or fraud scoring.

Business Problem

Financial fraud represents a small portion of transaction activity, making detection difficult through simple observation alone.

The objective of this analysis is to understand transaction behavior, identify fraud concentration patterns, and prepare the dataset for downstream fraud validation logic.

Importing libraries and Dataset

```
[1]: import pandas as pd
import numpy as np
import os
```

```
[2]: df = pd.read_csv("paysim[1].csv")
```

```
[3]: df.head()
```

[3]:	step	type	amount	nameOrig	oldbalanceOrg	newbalanceOrig	nameDest	c
------	------	------	--------	----------	---------------	----------------	----------	---
